

Guide Sheet: Desktop as a Service (DaaS)

In an increasingly mobile world, businesses and providers are always searching for new ways to manage the bring-your-own-device (BYOD) movement that also addresses growing data security concerns. With DaaS by DYOPATH, deployment and management of the desktop environment is simplified.

Why Clients Choose DYOPATH for DaaS

Management

Faster onboarding and updates due to the ability to manage desktops on a 1:many basis instead of 1:1.

Security

Higher level of security because applications and data live in the cloud as opposed to on devices.

Accessibility

Access any time, from anywhere with the most up-to-date data because it is automatically synced.

Secure Desktop Management, Simplified

Data and applications are accessed through a virtual environment, allowing businesses and providers to support, patch and maintain a single environment rather than numerous individual desktops. With one central environment, your data is more secure, and users are allowed the flexibility to choose between working on desktop or mobile devices, from anywhere.

Hardware

More time between replacing desktop hardware due to extended life of your machines.

Workforce

Ability to implement BYOD initiatives and allow staff to work remotely.

Cost

Less management, hardware and security costs which directly effects your bottom-line.
