

# Guide Sheet: Software Defined WAN

SD-WAN makes local internet breakouts easy and DYOPATH makes them secure. Moving to the cloud requires organizations to create secure, direct-to-internet connections. DYOPATH can help your organization move to SD-WAN as a cost-effective way to establish local internet breakouts with redundant connections while simplifying traffic routing.

## Why Clients Choose DYOPATH for SD-WAN

### Reduced Costs

Our solutions reduce costs with transport independence across MPLS, 4G/5G LTE, and other connection types.

### Increased Agility

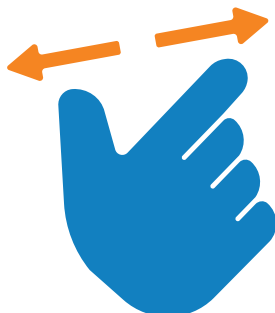

Our solutions improve application performance and increase agility.

### Optimized User Experience

We deliver an optimized user experience and efficiency for software-as-a-service (SaaS) and public-cloud applications. Simplify your operations with automation and cloud-based management.

## Business-Driven SD-WAN Solutions

DYOPATH securely enables SD-WAN and network transformation for organizations of all sizes. To be successful, organizations need a business-driven SD-WAN platform that automates connectivity to the cloud, secures direct access across the internet, simplifies data transfers across multi-cloud deployments and ultimately delivers the highest quality experience for end-users and IT.

- ✔ **ROI**  
Maximize the return on your cloud investments by increasing business agility, reducing risk, improving customer satisfaction, and increasing revenue with SD-WAN solutions provided by DYOPATH.
- ✔ **Freedom of Choice**  
DYOPATH provides you with the freedom of choice to leverage an array of best-in-class technology partners.
- ✔ **Our Partners**  
VMWare (formerly VeloCloud), BigLeaf, Meraki, Aryaka, Cato Networks, Versa, SilverPeak, ZeroOutages
