

Evaluate Your Readiness to Face Real-World Threats

DYOGUARD's Breach Attack Simulation (BAS) service offers your organization a modern, strategic approach to measuring and optimizing the effectiveness of your prevention and detection controls. By simulating real-world attack scenarios, our BAS solutions are custom-designed to meet the specific challenges of your business environment. Working closely with your security team, we identify potential vulnerabilities, deploy targeted simulations, and help you build a resilient defense against the most insidious cyber threats.

CORE OUTCOMES

- ✓ Measure your security posture with real-time metrics
- ✓ Validate critical attack paths that could potentially compromise systems and users
- ✓ Enhance detection and response to real-time threats
- ✓ Prioritize vulnerabilities by impact for risk-based strategic remediation efforts
- ✓ Boost your organization's overall cybersecurity awareness and team readiness
- ✓ Optimize your security investments by targeting critical areas
- ✓ Strengthen your defenses against emerging cyber threats

HOW IT WORKS...

STEP 1 CONTINUOUS BREACH ATTACK SIMULATION SETUP

Deploy BAS to continuously simulate and assess threats in real-time

STEP 2 CUSTOM SCENARIO DEVELOPMENT

Develop custom attack scenarios that reflect your unique business environment and security needs

STEP 3 ANALYSIS AND REPORTING

Generate detailed reports highlighting vulnerabilities and security gaps

STEP 4 RESPONSE OPTIMIZATION

Leverage simulation insights to streamline and enhance your incident response plans

STEP 5 REGULAR UPDATES AND ADJUSTMENTS

Ensure strategies and simulations evolve with the changing threat landscape

One Flexible Solution For All Your BAS Needs

| FEATURES | DYOGUARD (BAS) | Red Teaming | Pen Testing | Vulnerability Scanning |
|--|----------------|-------------|-------------|------------------------|
| Fully automated | | | | |
| Consistent and continuous assessments | | | | |
| Simulates the latest cyber threats | | | | |
| Validates security control effectiveness | | | | |
| Focused on identifying vulnerabilities | | | | |
| Simulates attacks targeting specific CVEs | | | | |
| Performs testing across the cyber kill chain | | | | |
| Generates metrics to measure effectiveness | | | | |
| Supplies actionable mitigation insights | | LIMITED | LIMITED | |
| Accelerates adoption of MITRE ATT&CK | | | | |
| Safely assess production environments | | | | |

Increase Your Cyber Resilience with Proactive Solutions

Don't wait for a cyber-attack to reveal the weaknesses in your defenses. Embrace the future with confidence by leveraging DYOGUARD's Breach Attack Simulation solutions.

Get in touch with **DYOPATH** today to discover how our tailored BAS services can strengthen your cybersecurity posture and protect your critical assets from advanced, relentless threats.
