Incorporate lasting behavioral changes that safeguard your organization.

### KEEPING YOUR VENDOR RELATIONSHIPS RESILIENT

Benefit from programs designed to engage, educate, and empower every team member.

# —ASSESSING AND MANAGING THIRD-PARTY RISKS TO— PROTECT YOUR BUSINESS

Working with vendors and suppliers brings great benefits, but it also brings risks. When you give third parties access to your data or systems, you're trusting them to keep that information safe. Many companies have been hit by cyberattacks that started at their vendors. That's why DYOPATH's vendor risk management goes beyond basic contracts. We check each vendor's security before you start working with them. We also monitor them over time to make sure they stay secure and compliant. We help you understand what risks each vendor brings and how to reduce those risks. The goal is to get the benefits of working with third parties while keeping your business safe from their security problems.

## ASSESSMENTS

Complete reviews of vendor security practices, including their network protection, data handling, employee training, and incident response plans, before you start working together.

## ONGOING MONITORING

Regular checks of vendor security status, compliance certificates, and security incident reports to catch problems early and make sure standards stay high over time.

## SCORING

Clear ratings that show how much risk each vendor brings to your business, helping you make smart decisions about contracts, access levels, and security requirements.
