

# Guide Sheet: Remote Monitoring & Management

DYOPATH provides a better way to remotely manage your IT. Remote Monitoring and Management (RMM) by DYOPATH enables our team of experts to manage the technology needs of our clients simply, efficiently and from anywhere.

## Why Clients Choose DYOPATH for Remote Monitoring & Management

### Network Operations Center (NOC)

Our US-based, 24x7x365 NOC is staffed with Network and Systems Engineers, Security Engineers and System Administrators to support our clients.

### Proactive

DYOPATH'S NOC monitors networks and systems for issues related to capacity, performance and security using real-time human monitoring and automated solutions simultaneously.

### Availability

Our RMM services ensure our clients' systems and data are always available. Our proactive approach mitigates potential risk of failure.

## Transform Your IT Management with DYOPATH

Our systems and services help gather insight about client networks, includes gaining information about machine health and status and supplying reports and data about client systems/networks.

✔ **Comprehensive**  
DYOPATH'S RMM solutions provide a comprehensive IT monitoring and management toolset with best-in-class integrations.

✔ **Business Continuity**  
We ensure that you network, and systems always remain operational and secure.

✔ **Reliability**  
DYOPATH provides RMM to highly sensitive client networks and systems that require the highest levels of availability.
